

## THE HIGH ROLLER

Exterior Walkway Railing  
Las Vegas, Nevada USA

L-62

The world's tallest observation wheel, the LINQ's High Roller, opened in Las Vegas on March 31. Railings featuring Banker Wire woven wire mesh guide visitors onto the 550-foot High Roller, which takes them on 30-minute rides high above the Las Vegas strip.

*"Southwest Architectural Metals teamed directly with the architect to redesign a custom stainless steel railing system that uses Banker Wire's Versatile Spine frame and R.B. Wagner's illuminated handrail,"* says senior project manager Matt Wright, of Southwest Architectural Metals, Henderson, NV, the fabricator for the project. *"The outcome of the collaboration provided the owner with a superior product that was custom-built to suit this unique project."*

The Banker Wire L-62 metal fabric used at the High Roller has a contemporary look that matches the wheel's sleek aesthetic while providing strength and durability. The Versatile Spine frame was also used to work seamlessly with the illuminated handrail - it's a stylish alternative to traditional framing and provides a strong interface for the woven wire mesh.
